Flowchart Of User Interaction On Story Generator Website

The story generation will be plugged in MadLib style, if we have time would be nice to implement more story developing features in API

Website asks for new characters or continue with created ones

New Characters

Same Characters

Yes

User searches for story generator site → Website loads to the home page → System prompts for key words and character names

User enters key words for story → Website uses Django to compare key words to database of genre specific key words

System collects names and key words in API → Website displays character names and key words into generated story MadLib style → Website prompts for another generated story

User enters how many characters → Website prompts for names of characters
